

# Shared Account

The *Shared Account* feature allows you to create completely separate accounts each with their own branding, account numbers, statistics etc. The only difference is that the shared account will **share** the impressions limits of the main account and use their associated billing. This is ideal when managing multiple websites and you you'd like to keep things separate or if you're a developer that may provide this service as a benefit to your clients.

To access, as Administrator click *Features / Settings* > Share Account (Multiple Domains)

With the Shared Account feature you can login using the username and password you selected when creating the account OR you can switch into the account from your primary account. The secondary or shared accounts can not switch back into the primary account for your account security.

The screenshot displays a dashboard with the following elements:

- Alerts:** A blue notification bar at the top states "1 Ads have expired. 0 Ads will expire soon."
- Account Management:** A red "Switch Accounts" button is visible. Below it, the current account is identified as "102387 - webmaster@myotherdomain.com". A "Create New Shared Account" button is also present, with "All Time Revenue" listed below it.
- Revenue Summary:** A clock icon is next to "\$0.00 2015 Year-to-Date".
- Analytics Section:** A section titled "RECENT VISITORS (LAST 15 MINUTES) 0" includes a search icon. Below this, a table compares "All Time" performance:

	All Time
Impressions	1136153
Clicks	8635
